

# VAIBHAV JAIN

Full Stack Developer | MERN Stack | React / Node.js

Bengaluru, India | [+91-6364317871](tel:+91-6364317871) | [rvaibhavjain1703@gmail.com](mailto:rvaibhavjain1703@gmail.com)

LinkedIn: [www.linkedin.com/in/vaibhav-jain-7b0919259](https://www.linkedin.com/in/vaibhav-jain-7b0919259) | Portfolio: [vaibhavjainportfolio.netlify.app](https://vaibhavjainportfolio.netlify.app)

## PROFESSIONAL SUMMARY

---

Results-driven Full Stack Developer with hands-on experience building scalable web applications across the MERN stack, including AI-assisted features for real-world platforms. Proven track record delivering end-to-end solutions, from crafting responsive React frontends to designing robust Node.js and PHP backends, RESTful APIs validated with Postman, and AI-powered detection systems deployed via Netlify and CI/CD pipelines. Passionate about writing clean, maintainable code and collaborating in agile teams to ship products that solve real business problems.

## TECHNICAL SKILLS

---

**Languages:** JavaScript (ES6+), PHP, Java, HTML5, CSS3, SQL, JSON

**Frontend:** React.js, Next.js, TypeScript (TSX/JSX), jQuery, AJAX, Responsive Design, UI/UX Principles

**Backend:** Node.js, Express.js, REST API Development, PHP

**Databases:** MongoDB, MySQL, NoSQL

**Stack & Tools:** MERN Stack, Git, GitHub, GitHub Actions, YAML/CI-CD, Docker, VS Code

**Testing & API Tools:** Postman (API testing — GET/POST request validation), manual test-case design

**Deployment:** Netlify (portfolio deployment, static hosting, CI-linked deploys)

**AI Tools:** Claude Code (LLM-assisted development)

**Concepts:** Full Stack Architecture, Authentication & Authorization, Data Modeling

## WORK EXPERIENCE

---

### Full Stack Developer Intern — WebMatrix Inc.

June 2026 – Sept 2026

- Delivered a significantly more realistic and reliable interview experience, validated across 14 structured test interviews, by redesigning core interview module workflows on the SeniorCarePro.ai platform.
- Strengthened the integrity of the interview process by implementing a two-step application verification system, closing a key gap in candidate authentication.
- Consistently triggered real-time malpractice notifications across varied manual test scenarios, reducing reviewer monitoring effort, by escalating to an integrity flag after a second occurrence and automatically ending the interview after a third.
- Earned direct positive feedback from the product manager, who specifically praised how malpractice events were logged sequentially with a synchronized video timeline, by designing the AI-powered interview analysis and reporting system.
- Enabled interviewers to catch unauthorized secondary devices in real time by developing AI-based device detection logic — flagging visible items like a mobile phone and logging identifying details such as device color directly into the review report.
- Maintained consistent build and release automation across the module by managing CI/CD pipelines and environment configuration through YAML and GitHub Actions.

### Backend Developer Intern — WoRisGo, Bengaluru

July 2025 – Sept 2025

- Enabled reliable support for booking and analytics workflows across multiple frontend services by architecting RESTful backend APIs in Node.js and PHP.
- Cut query execution time by approximately 30%, verified through direct before/after benchmarking, by optimizing MySQL database schemas and indexing strategy.
- Eliminated contract-breaking integration issues between frontend and backend teams by defining, documenting, and validating REST API contracts (GET/POST) using Postman, in close collaboration with frontend engineers.

- Delivered a fully functioning internal Booking Management System into production use by owning schema design, CRUD operations, and core business logic end-to-end.

## Frontend / Full Stack Intern — The Commerce Team Global, Remote

May 2024 – July 2024

- Delivered a consistent user experience across device breakpoints by building and maintaining responsive frontend modules in React.js, HTML, CSS, and JavaScript.
- Removed the need for full-page reloads on content updates by integrating dynamic backend functionality via PHP and AJAX.
- Enabled secure, end-to-end login and checkout flows by implementing authentication and connecting frontend components to backend APIs.
- Improved page responsiveness across devices by auditing and optimizing frontend performance.

## KEY PROJECTS

---

### SeniorCarePro.ai — Interview Module — WebMatrix Inc.

React, TSX, JSX, PHP, MySQL, YAML, GitHub Actions, Claude Code (LLM)

- Contributed to the Interview Module of SeniorCarePro.ai, an AI-assisted senior care platform, focused on making the interview experience more realistic, reliable, and secure.
- Implemented two-step application verification to strengthen the integrity of the interview process.
- Built malpractice detection mechanisms, including real-time warnings when a candidate switches browser tabs during an interview.
- Developed AI-based secondary device detection to flag visible items (e.g., a mobile phone) during an interview and log identifying details such as device color into the review report.
- Validated the AI-powered interview analysis system through structured test interviews, confirming that generated review notes consistently and accurately described candidate behavior and flagged attempted malpractice.
- Focused output design on accurate, actionable interview data to support better-informed interviewer assessments.

### Booking Management System — WoRisGo

PHP, MySQL, MERN Stack

- Built a backend booking system to manage meeting scheduling and internal resource allocation.
- Designed normalized relational database schemas in MySQL, improving data integrity and retrieval efficiency.
- Developed RESTful endpoints consumed by the frontend for real-time availability checks and booking confirmations.

### GigX - LMS & Freelancing Platform

Node.js, React.js, Next.js, MongoDB, Docker

- Integrated a Learning Management System (LMS) with a freelancing marketplace portal in a unified Next.js application.
- Built backend verification logic and REST APIs enabling real-time data exchange between users and clients.
- Leveraged MongoDB for flexible document storage across courses, user profiles, and project listings.
- Automated image builds and streamlined environment consistency across development setups by containerizing the application using Docker.

## EDUCATION

---

B.Tech in Computer Science & Engineering — Jain (Deemed-to-be) University, Bengaluru | 2022 – 2026

Class XII (PCM) — BKG PU College, Karnataka, 89% | 2020 – 2022

Class X — Surabhi Vidyaniketan, Hosapete, Karnataka, 73% | 2018 – 2020
